

Visualizing and Predicting Heart Diseases with an Interactive Dashboard

Idea 1

To get a data from single person from there starting day of checkup to till up to date by using this we can predict there medical analysis through this.

Idea 2

If a particular person avoids to take the checkup we can create an alert notification or message to check out there check up status details.

Idea 3

If a particular person arrives for a checkup and the particular doctor is not available at right movement by the dashboard we can set another available doctor to them.
